

# ZUMA 125 MOTORCYCLE

A Read this manual carefully before operating this vehicle.

YW125L

BC9-F8199-14

warning. Operating, servicing and maintaining a passenger vehicle or off-road vehicle can expose you to chemicals including engine exhaust, carbon monoxide, phthalates, and lead, which are known to the State of California to cause cancer and birth defects or other reproductive harm. To minimize exposure, avoid breathing exhaust, do not idle the engine except as necessary, service your vehicle in a well-ventilated area and wear gloves or wash your hands frequently when servicing your vehicle. For more information go to www.P65Warnings.ca.gov/passenger-vehicle

• Read this manual carefully before operating the vehicle. This manual should stay with the vehicle if it is sold.

#### Introduction

EALITONGS

Congratulations on your purchase of the Yamaha YW125L. This model is the result of Yamaha's vast experience in the production of fine sporting, touring, and pace-setting racing machines. It represents the high degree of craftsmanship and reliability that have made Yamaha a leader in these fields.

This manual will give you an understanding of the operation, inspection, and basic maintenance of this scooter. If you have any questions concerning the operation or maintenance of your scooter, please consult a Yamaha dealer.

The design and manufacture of this Yamaha scooter fully comply with the emissions standards for clean air applicable at the date of manufacture. Yamaha has met these standards without reducing the performance or economy of operation of the scooter. To maintain these high standards, it is important that you and your Yamaha dealer pay close attention to the recommended maintenance schedules and operating instructions contained within this manual.

Yamaha continually seeks advancements in product design and quality. Therefore, while this manual contains the most current product information available at the time of printing, there may be minor discrepancies between your scooter and this manual. If there is any question concerning this manual, please consult a Yamaha dealer

EWA12582

### **WARNING**

Please read this manual and the "YOU AND YOUR MOTORCYCLE: RIDING TIPS" booklet carefully and completely before operating this scooter. Do not attempt to operate this scooter until you have attained adequate knowledge of its controls and operating features and until you have been trained in safe and proper riding techniques. Regular inspections and careful maintenance, along with good riding skills, will ensure that you safely enjoy the capabilities and reliability of this scooter.

## Important manual information

EALI63350

Particularly important information is distinguished in this manual by the following notations:

$\triangle$	This is the safety alert symbol. It is used to alert you to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death.
<b>▲</b> WARNING	A WARNING indicates a hazardous situation which, if not avoided, could result in death or serious injury.
NOTICE	A NOTICE indicates special precautions that must be taken to avoid damage to the vehicle or other property.
TIP	A TIP provides key information to make procedures easier or clearer.

<sup>\*</sup>Product and specifications are subject to change without notice.

FAU1026B

#### Be a Responsible Owner

As the vehicle's owner, you are responsible for the safe and proper operation of your scooter.

Scooters are single-track vehicles.

Their safe use and operation are dependent upon the use of proper riding techniques as well as the expertise of the operator. Every operator should know the following requirements before riding this scooter.

He or she should:

- Obtain thorough instructions from a competent source on all aspects of scooter operation.
- Observe the warnings and maintenance requirements in this Owner's Manual
- Obtain qualified training in safe and proper riding techniques.
- Obtain professional technical service as indicated in this Owner's Manual and/or when made necessary by mechanical conditions.
- Never operate a scooter without proper training or instruction. Take a training course. Beginners should receive training from a certified instructor. Contact an authorized scooter dealer to find out about the training courses nearest you.

#### Safe Riding

Perform the pre-operation checks each time you use the vehicle to make sure it is in safe operating condition. Failure to inspect or maintain the vehicle properly increases the possibility of an accident or equipment damage. See page 5-1

for a list of pre-operation checks.

- This scooter is designed to carry the operator and a passenger.
- The failure of motorists to detect and recognize scooters in traffic is the predominating cause of automobile/scooter accidents. Many accidents have been caused by an automobile driver who did not see the scooter. Making yourself conspicuous appears to be very effective in reducing the chance of this type of accident.

#### Therefore:

- · Wear a brightly colored jacket.
- Use extra caution when you are approaching and passing through intersections, since intersections are the most likely places for scooter accidents to
- Ride where other motorists can see you. Avoid riding in another motorist's blind spot.
- Never maintain a scooter without proper knowledge. Contact an authorized scooter dealer to inform you on basic scooter maintenance. Certain maintenance can only be carried out by certified staff.
- Many accidents involve inexperienced operators. In fact, many operators who have been involved in accidents do not even have a current driver's license.
  - Make sure that you are qualified and that you only lend your scooter to other qualified operators.
  - Know your skills and limits.
     Staying within your limits may

## **△ Safety information**

help you to avoid an accident.

- We recommend that you practice riding your scooter where there is no traffic until you have become thoroughly familiar with the scooter and all of its controls
- Many accidents have been caused by error of the scooter operator. A typical error made by the operator is veering wide on a turn due to excessive speed or undercornering (insufficient lean angle for the speed).
  - Always obey the speed limit and never travel faster than warranted by road and traffic conditions.
  - Always signal before turning or changing lanes. Make sure that other motorists can see you.
- The posture of the operator and passenger is important for proper control.
  - The operator should keep both hands on the handlebar and both feet on the operator footrests during operation to maintain control of the scooter.
  - The passenger should always hold onto the operator, the seat strap or grab bar, if equipped, with both hands and keep both feet on the passenger footrests. Never carry a passenger unless he or she can firmly place both feet on the passenger footrests.
- Never ride under the influence of alcohol or other drugs.
- This scooter is designed for onroad use only. It is not suitable for off-road use.

#### **Protective Apparel**

The majority of fatalities from scooter accidents are the result of head injuries. The use of a safety helmet is the single most critical factor in the prevention or reduction of head injuries.

- Always wear an approved helmet.
- Wear a face shield or goggles.
   Wind in your unprotected eyes could contribute to an impairment of vision that could delay seeing a hazard.
- The use of a jacket, substantial shoes, trousers, gloves, etc., is effective in preventing or reducing abrasions or lacerations.
- Never wear loose-fitting clothes, otherwise they could catch on the control levers or wheels and cause injury or an accident.
- Always wear protective clothing that covers your legs, ankles, and feet. The engine or exhaust system become very hot during or after operation and can cause burns.
- A passenger should also observe the above precautions.

#### **Avoid Carbon Monoxide Poisoning**

All engine exhaust contains carbon monoxide, a deadly gas. Breathing carbon monoxide can cause headaches, dizziness, drowsiness, nausea, confusion, and eventually death.

Carbon Monoxide is a colorless, odorless, tasteless gas which may be present even if you do not see or smell any engine exhaust. Deadly levels of carbon monoxide can collect rapidly and you can quickly be overcome and unable to save yourself. Also, deadly levels of carbon monoxide can linger for

## **△ Safety information**

hours or days in enclosed or poorly ventilated areas. If you experience any symptoms of carbon monoxide poisoning, leave the area immediately, get fresh air, and SEEK MEDICAL TREATMENT

- Do not run engine indoors. Even if you try to ventilate engine exhaust with fans or open windows and doors, carbon monoxide can rapidly reach dangerous levels.
- Do not run engine in poorly ventilated or partially enclosed areas such as barns, garages, or carports.
- Do not run engine outdoors where engine exhaust can be drawn into a building through openings such as windows and doors.

#### Loading

Adding accessories or cargo to your scooter can adversely affect stability and handling if the weight distribution of the scooter is changed. To avoid the possibility of an accident, use extreme caution when adding cargo or accessories to your scooter. Use extra care when riding a scooter that has added cargo or accessories. Here, along with the information about accessories below, are some general guidelines to follow if loading cargo to your scooter:

The total weight of the operator, passenger, accessories and cargo must not exceed the maximum load limit. Operation of an overloaded vehicle could cause an accident.

Maximum load: 158 kg (348 lb)

When loading within this weight limit,

keep the following in mind:

- Cargo and accessory weight should be kept as low and close to the scooter as possible. Securely pack your heaviest items as close to the center of the vehicle as possible and make sure to distribute the weight as evenly as possible on both sides of the scooter to minimize imbalance or instability.
- Shifting weights can create a sudden imbalance. Make sure that accessories and cargo are securely attached to the scooter before riding. Check accessory mounts and cargo restraints frequently.
  - Properly adjust the suspension for your load (suspension-adjustable models only), and check the condition and pressure of your tires.
  - Never attach any large or heavy items to the handlebar, front fork, or front fender. Such items can create unstable handling or a slow steering response.
- This vehicle is not designed to pull a trailer or to be attached to a sidecar.

#### **Genuine Yamaha Accessories**

Choosing accessories for your vehicle is an important decision. Genuine Yamaha accessories, which are available only from a Yamaha dealer, have been designed, tested, and approved by Yamaha for use on your vehicle.

Many companies with no connection to Yamaha manufacture parts and accessories or offer other modifications for Yamaha vehicles. Yamaha is not in a position to test the products that these

## **△ Safety information**

aftermarket companies produce. Therefore, Yamaha can neither endorse nor recommend the use of accessories not sold by Yamaha or modifications not specifically recommended by Yamaha, even if sold and installed by a Yamaha dealer.

## Aftermarket Parts, Accessories, and Modifications

While you may find aftermarket products similar in design and quality to genuine Yamaha accessories, recognize that some aftermarket accessories or modifications are not suitable because of potential safety hazards to you or others. Installing aftermarket products or having other modifications performed to your vehicle that change any of the vehicle's design or operation characteristics can put you and others at greater risk of serious injury or death. You are responsible for injuries related to changes in the vehicle.

Keep the following guidelines in mind, as well as those provided under "Loading" when mounting accessories.

- Never install accessories or carry cargo that would impair the performance of your scooter. Carefully inspect the accessory before using it to make sure that it does not in any way reduce ground clearance or cornering clearance, limit suspension travel, steering travel or control operation, or obscure lights or reflectors.
  - Accessories fitted to the handlebar or the front fork area can create instability due to improper weight distribution or aerodynamic changes. If accessories

- are added to the handlebar or front fork area, they must be as lightweight as possible and should be kept to a minimum.
- Bulky or large accessories may seriously affect the stability of the scooter due to aerodynamic effects. Wind may attempt to lift the scooter, or the scooter may become unstable in cross winds. These accessories may also cause instability when passing or being passed by large vehicles.
- Certain accessories can displace the operator from his or her normal riding position. This improper position limits the freedom of movement of the operator and may limit control ability, therefore, such accessories are not recommended.
- Use caution when adding electrical accessories. If electrical accessories exceed the capacity of the scooter's electrical system, an electric failure could result, which could cause a dangerous loss of lights or engine power.

#### **Aftermarket Tires and Rims**

The tires and rims that came with your scooter were designed to match the performance capabilities and to provide the best combination of handling, braking, and comfort. Other tires, rims, sizes, and combinations may not be appropriate. Refer to page 7-17 for tire specifications and more information on replacing your tires.

## 

#### **Transporting the Scooter**

Be sure to observe following instructions before transporting the scooter in another vehicle

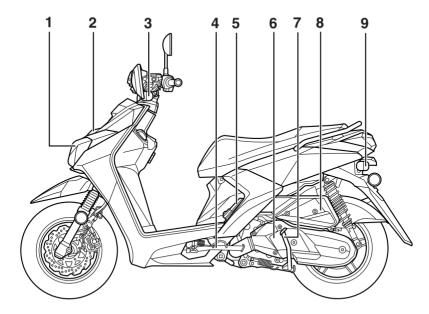

- Remove all loose items from the scooter.
- Point the front wheel straight ahead on the trailer or in the truck bed, and choke it in a rail to prevent movement.
- Secure the scooter with tie-downs or suitable straps that are attached to solid parts of the scooter, such as the frame or upper front fork triple clamp (and not, for example, to rubber-mounted handlebars or turn signals, or parts that could break). Choose the location for the straps carefully so the straps will not rub against painted surfaces during transport.
- The suspension should be compressed somewhat by the tiedowns, if possible, so that the scooter will not bounce excessively during transport.

EAU57600

### Further safe-riding points

- Be sure to signal clearly when making turns.
- Braking can be extremely difficult on a wet road. Avoid hard braking, because the scooter could slide. Apply the brakes slowly when stopping on a wet surface.
- Slow down as you approach a corner or turn. Once you have completed a turn, accelerate slowly.
- Be careful when passing parked cars. A driver might not see you and open a door in your path.
- Railroad crossings, streetcar rails, iron plates on road construction sites, and manhole covers become extremely slippery when wet. Slow down and cross them with caution. Keep the scooter upright, otherwise it could slide out from under you.
- The brake pads or linings could get wet when you wash the scooter. After washing the scooter, check the brakes before riding.
- Always wear a helmet, gloves, trousers (tapered around the cuff and ankle so they do not flap), and a brightly colored jacket.
- Do not carry too much luggage on the scooter. An overloaded scooter is unstable. Use a strong cord to secure any luggage to the carrier (if equipped). A loose load will affect the stability of the scooter and could divert your attention from the road. (See page 2-3.)

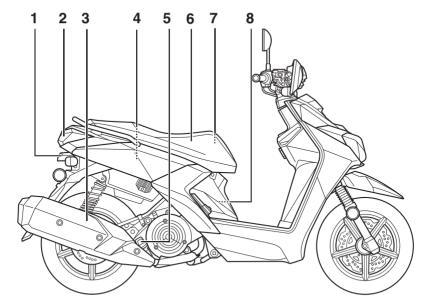

#### Left view

- 10.Main switch/steering lock (page 4-1)
- 11.Front storage compartment (page 4-13)
- 12.Luggage holder (page 4-15)

Main switch/steering lock

The main switch/steering lock controls the ignition and lighting systems, and is used to lock the steering. The various positions are described below.

#### TIP

The main switch/steering lock is equipped with a keyhole cover. (See page 4-2.)

EAU84031

#### ON

All electrical circuits are supplied with power and the vehicle lights are turned on. The engine can be started. The key cannot be removed.

#### TIP

- The headlight(s) will turn on when the engine is started.
- To prevent battery drain, do not leave the key in the on position without the engine running.

**OFF** 

EAU10662

All electrical systems are off. The key can be removed.

EWA10062

**WARNING** 

Never turn the key to "OFF" or "LOCK" while the vehicle is moving.

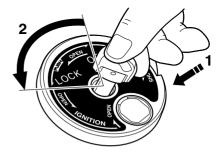

Otherwise the electrical systems will be switched off, which may result in loss of control or an accident.

#### LOCK

FALI1068B

The steering is locked and all electrical systems are off. The key can be removed

#### To lock the steering

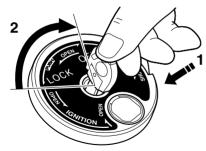

- 1. Push.
- 2. Turn.
  - Turn the handlebars all the way to the left.
  - 2. With the key in the "OFF" position, push the key in and turn it to "LOCK".
  - 3. Remove the key.

#### TIP\_\_\_

If the steering will not lock, try turning the handlebars back to the right slightly.

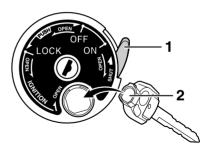

#### To unlock the steering

- 1. Push.
- 2. Turn.

From the "LOCK" position, push the key in and turn it to "OFF".

#### **Keyhole cover**

FΔI IT2112

- 1. Keyhole cover lever
- 2. Key bow

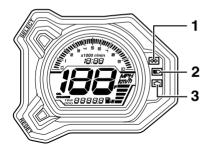

#### To open the keyhole cover

Insert the key bow into the keyhole cover receptacle as shown, and then turn the key to the right to open the cover.

#### To close the keyhole cover

Push the keyhole cover lever inward and the keyhole cover will close.

Indicator lights and warning light

- 1. Turn signal indicator light "♦ ♦"
- 2. High beam indicator light "≣○"
- 3. Engine trouble warning light "云"

Turn signal indicator light "⇔ ⇔"

This indicator light flashes when a turn signal light is flashing.

High beam indicator light "≣⊜" EAU1108

This indicator light comes on when the high beam of the headlight is switched on.

Engine trouble warning light "円"

This warning light comes on or flashes if a problem is detected in the engine. If this occurs, have a Yamaha dealer check the vehicle as soon as possible.

TIP

When the vehicle is turned on, this light should come on for a few seconds and then go off. Otherwise, have a Yamaha dealer check the electrical circuit.

#### **Multi-function display**

EAUT5000

EWA12313

#### **WARNING**

Be sure to stop the vehicle before making any setting changes to the multi-function display. Changing settings while riding can distract the operator and increase the risk of an accident.

- 1. Tachometer
- 2. Select button
- Speedometer
- 4. Reset button
- 5 Clock
- 6. Fuel meter
- 7. Odometer

The multi-function display is equipped with the following:

- a speedometer
- a tachometer
- a fuel meter
- an odometer
- a tripmeter
- an oil change tripmeter
- an oil change indicator
- a clock

#### TIP

- Be sure to turn the key to on.
- To switch the speedometer, odometer, and tripmeters between miles and kilometers, push the "SE-

LECT" button for 1 second

#### Speedometer

The speedometer shows the vehicle's traveling speed.

"MPH" (miles per hour) comes on when the display is set to miles, and "km/h" (kilometers per hour) comes on when the display is set to kilometers.

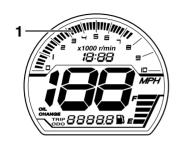

#### 1. Speedometer

#### **Tachometer**

The electric tachometer allows the rider to monitor the engine speed and keep it within the ideal power range.

When the key is turned to "ON", all of the display segments of the tachometer will sweep once across the r/min range and then return to zero r/min in order to test the electrical circuit.

#### 1. Tachometer

#### Fuel meter

The fuel meter indicates the amount of fuel in the fuel tank

The display segments of the fuel meter disappear from "F" (full) towards "E" (empty) as the fuel level decreases. When "\(\bi\)" starts flashing, refuel as soon as possible. When the key is turned to "ON", all of the display segments of the fuel meter will appear for a few secondsand then show the actual fuel level.

#### 1. Fuel meter

## Odometer, tripmeter and oil change tripmeter modes

Push the "SELECT" button to switch the display among the odometer mode "ODO", the tripmeter mode "TRIP" and the oil change tripmeter mode "OIL CHANGE" in the following order:

ODO ightarrow TRIP ightarrow OIL CHANGE ightarrow ODO

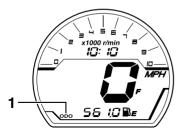

#### TIP

If the odometer, tripmeter, or oil change tripmeter modes indicates "----", have a Yamaha dealer check the multi-function display.

#### Odometer mode

The odometer shows the total distance the vehicle has traveled. It cannot be

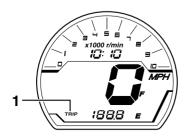

reset. However, the odometer and tripmeter units can be switched between miles and kilometers by pushing the "SELECT" button for 1 second.

1. Odometer

#### **Tripmeter mode**

The tripmeter shows the distance traveled since it was last reset. If not reset after a trip, the displayed value will return to 0.0 after 9999.9 miles or kilometers have elapsed. To reset the tripmeter, push the "RESET" button for 1 second.

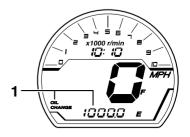

1. Tripmeter

#### Oil change tripmeter mode

The oil change tripmeter shows the distance traveled since the engine oil was last changed and this tripmeter was reset. To reset the oil change tripmeter (and the oil change indicator), push the "RESET" button for 1 second. Then,

while the oil change indicator is flashing, push the "RESET" button for 3 seconds. The oil change tripmeter will reset and the oil change indicator will stop flashing. Push the "SELECT" button to start the oil change tripmeter and change the display to odometer mode.

1. Oil change tripmeter

## Oil change indicator "OIL CHANGE"

The engine oil indicator will flash at the initial 1000 km (600 mi) and then at every 3000 km (1800 mi) thereafter to indicate that the engine oil should be changed.

After changing the engine oil, be sure to reset the oil change tripmeter because this indicator works in conjuntion with the oil change tripmeter and must be reset.

If the engine oil is changed before the oil change indicator flashes (i.e. before the periodic oil change interval has been reached), the oil change tripmeter must be reset in order for the next periodic oil change to be indicated at the correct time.

#### TIP

If the oil change tripmeter is reset before the initial 1000 km (600 mi), the periodic oil change interval will be at every

3000 km (1800 mi) thereafter.

#### Clock

The clock uses a 12-hour time system.

#### To set the clock:

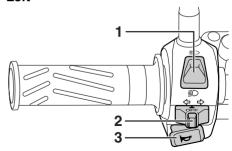

- Set the display to "ODO", then press the "RESET" button for at least three seconds.
- 2. When the hour digits start flashing, push the "SELECT" button to set the hours.
- 3. Push the "RESET" button, and the first minute digit will start flashing.
- 4. Push the "SELECT" button to set the first minute digit.
- Push the "RESET" button and the second minute digit will start flashing.
- 6. Push the "SELECT" button to set the second minute digit.
- 7. Push the "RESET" button to start the clock.

#### TIP

If you do not push the "SELECT" or the "RESET" button within 30 seconds, the setting of the clock will not be completed and the display will change to "ODO" mode.

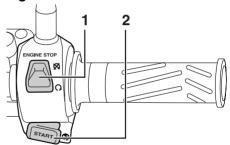

#### Handlebar switches

#### l eft

- 1. Dimmer switch "≣⊜/≝⊙"
- 3. Horn switch " "

#### Right

- Engine stop switch "○/♥"
- 2. Start switch "(§)"

#### Dimmer switch "≣⊘/≝⊘"

Set this switch to " $\equiv$ " for the high beam and to " $\equiv$ " for the low beam.

EAU12461

FΔI 112402

FΔI 11234M

#### Turn signal switch "⟨¬/¬⟩"

To signal a right-hand turn, push this switch to "\(\rightharpoonup\)". To signal a left-hand turn, push this switch to "\(\rightharpoonup\)". When released, the switch returns to the center position. To cancel the turn signal lights, push the switch in after it has returned to the center position.

FΔI 112902

#### Instrument and control functions

#### Horn switch "►"

Press this switch to sound the horn.

#### Engine stop switch "∩/⊗"

Set this switch to "\(\cap\)" (run) before starting the engine. Set this switch to "\(\pi\)" (stop) to stop the engine in case of an emergency, such as in the event of an overturn or if the throttle is stuck.

#### EAUM1133

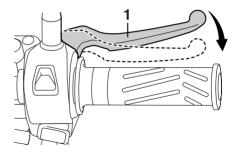

EAU12501

FAU12663

#### Start switch "⊗"

Push this switch while applying the front or rear brake to crank the engine with the starter. See page 6-2 for starting instructions prior to starting the engine.

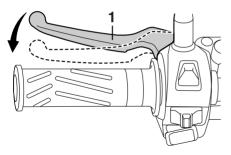

#### Front brake lever

1. Front brake lever

The front brake lever is located on the right side of the handlebar. To apply the front brake, pull this lever toward the throttle grip.

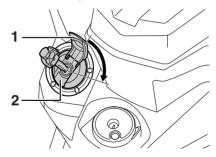

#### Rear brake lever

1. Rear brake lever

The rear brake lever is located on the left side of the handlebar. To apply the rear brake, pull this lever toward the handlebar grip.

## Fuel tank cap

- 1. Fuel tank cap lock cover
- 2. Fuel tank cap

#### To open the fuel tank cap

Open the fuel tank cap lock cover, insert the key into the lock, and then turn it 1/4 turn clockwise. The lock will be released and the fuel tank cap can be opened.

#### To close the fuel tank cap

With the key still inserted in the lock, push down the fuel tank cap. Turn the key 1/4 turn counterclockwise, remove it, and then close the lock cover.

#### TIP

The fuel tank cap cannot be closed unless the key is in the lock. In addition, the key cannot be removed if the cap is not properly closed and locked.

EWA11092

FΔI 113076

#### **WARNING**

Make sure that the fuel tank cap is properly closed after filling fuel. Leaking fuel is a fire hazard.

EAU13222

#### Fuel

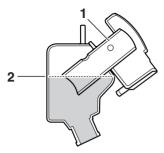

Make sure there is sufficient gasoline in the tank

EWA10882

#### **WARNING**

Gasoline and gasoline vapors are extremely flammable. To avoid fires and explosions and to reduce the risk of injury when refueling, follow these instructions.

- Before refueling, turn off the engine and be sure that no one is sitting on the vehicle. Never refuel while smoking, or while in the vicinity of sparks, open flames, or other sources of ignition such as the pilot lights of water heaters and clothes dryers.
- Do not overfill the fuel tank. When refueling, be sure to insert the pump nozzle into the fuel tank filler hole. Stop filling when the fuel reaches the bottom of the filler tube. Because fuel expands when it heats up, heat from the engine or the sun can cause fuel to spill out of the fuel tank.

- 1. Fuel tank filler tube
- 2. Maximum fuel level
  - Wipe up any spilled fuel immediately. NOTICE: Immediately wipe

- off spilled fuel with a clean, dry, soft cloth, since fuel may deteriorate painted surfaces or plastic parts. ECA100721
- 4. Be sure to securely close the fuel tank cap.

EWA15152

#### **⚠** WARNING

Gasoline is poisonous and can cause injury or death. Handle gasoline with care. Never siphon gasoline by mouth. If you should swallow some gasoline or inhale a lot of gasoline vapor, or get some gasoline in your eyes, see your doctor immediately. If gasoline spills on your skin, wash with soap and water. If gasoline spills on your clothing, change your clothes.

EAU36086

#### Recommended fuel

Unleaded gasoline only **Fuel tank capacity:** 

6.5 L (1.7 US gal, 1.4 Imp.gal)

ECA11401

#### NOTICE

Use only unleaded gasoline. The use of leaded gasoline will cause severe damage to internal engine parts, such as the valves and piston rings, as well as to the exhaust system.

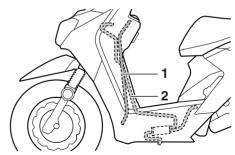

Your Yamaha engine has been designed to use regular unleaded gasoline with a pump octane number [(R+M)/2] of 86 or higher, or a research octane number of 91 or higher. If knocking (or pinging) occurs, use a gasoline of a different brand or premium unleaded fuel. Use of unleaded fuel

will extend spark plug life and reduce maintenance costs

#### Gasohol

There are two types of gasohol: gasohol containing ethanol and that containing methanol. Gasohol containing ethanol can be used if the ethanol content does not exceed 10% (E10). Gasohol containing methanol is not recommended by Yamaha because it can cause damage to the fuel system or vehicle performance problems.

## Fuel tank breather hose and overflow hose

- 1. Fuel tank overflow hose
- 2 Fuel tank breather hose

The breather hose prevents a vacuum condition from forming within the fuel tank

The overflow hose drains excess gasoline and directs it safely away from the vehicle

Before operating the vehicle:

- Check each hose connection.
- Check each hose for cracks or damage, and replace if necessary.
- Make sure that the end of each hose is not blocked, and clean if necessary.
- Make sure that each hose is positioned as shown.

Catalytic converter

The exhaust system contains catalytic converter(s) to reduce harmful exhaust emissions

EWA10863

FΔ1113435

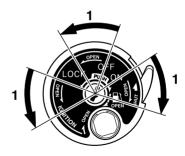

#### **WARNING**

The exhaust system is hot after operation. To prevent a fire hazard or burns:

- Do not park the vehicle near possible fire hazards such as grass or other materials that easily burn.
- Park the vehicle in a place where pedestrians or children are not likely to touch the hot exhaust system.
- Make sure that the exhaust system has cooled down before doing any maintenance work.
- Do not allow the engine to idle more than a few minutes. Long idling can cause a build-up of heat.

Seat

EAUT5010

1. Turn.

#### To open the seat

- Place the scooter on the centerstand.
- 2. From the OFF, LOCK or ON position, turn the key as shown.

TIP

The key should not be pushed in when unlocking the seat.

3. Fold the seat up.

#### To close the seat

- 1. Fold the seat down, and then push it down to lock it in place.
- Remove the key from the main switch if the scooter will be left unattended.

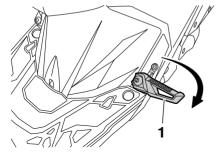

TIP

Make sure that the seat is properly secured before riding.

EALITEOOO

#### **Passenger footrest**

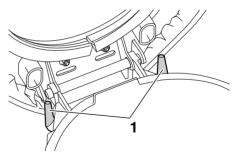

To use the passenger footrest, move the footrest downward as shown.

1. Passenger footrest

To retract the passenger footrest, move it back to its original position.

#### Helmet holder

FΔI 114302

1. Helmet holder

The helmet holder is located under the seat

## To secure a helmet to the helmet holder

- 1. Open the seat. (See page 4-11.)
- Attach the helmet to the helmet holder, and then securely close the seat. WARNING! Never ride with a helmet attached to the helmet holder, since the helmet may hit objects, causing loss of control and possibly an accident. [EWA10162]

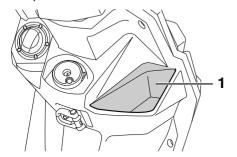

## To release the helmet from the helmet holder

Open the seat, remove the helmet from the helmet holder, and then close the seat.

Storage compartments

Front storage compartment

The front storage compartment is located at the front of the vehicle. Use this compartment for small items.

1. Front storage compartment

EWA17250

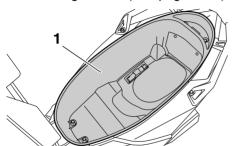

FΔI 157081

#### **WARNING**

- Do not exceed the load limit of 1.5 kg (3.3 lb) for the front storage compartment.
- Do not place anything in the front storage compartment that will interfere with your operating the vehicle.

#### Rear storage compartment

The rear storage compartment is located under the seat. Use this compartment for large items. (See page 4-11.)

1. Rear storage compartment

#### **WARNING**

- Do not exceed the load limit of 5 kg (11 lb) for the rear storage compartment.
- Do not exceed the maximum load of 158 kg (348 lb) for the vehicle.

ECA21150

EW/AT10E0

#### **NOTICE**

Keep the following points in mind when using the storage compartment.

- Since the storage compartment accumulates heat when exposed to the sun and/or the engine heat, do not store anything susceptible to heat, consumables or flammable items inside it.
- To avoid humidity from spreading through the storage compartment, wrap wet articles in a plastic bag before storing them in the compartment.
- Since the storage compartment may get wet while the vehicle is being washed, wrap any articles stored in the compartment in a plastic bag.
- Do not keep anything valuable or breakable in the storage compartment.

#### TIP

Do not leave your vehicle unattended with the seat open.

## Adjusting the shock absorber assemblies

FWA10211

FΔI 11/1885

#### **WARNING**

Always adjust both shock absorber assemblies equally, otherwise poor handling and loss of stability may result.

Each shock absorber assembly is equipped with a spring preload adjusting ring.

ECA10102

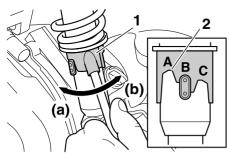

#### **NOTICE**

To avoid damaging the mechanism, do not attempt to turn beyond the maximum or minimum settings.

Adjust the spring preload as follows. Turn the adjusting ring in direction (a) to increase the spring preload.

Turn the adjusting ring in direction (b) to decrease the spring preload.

Align the appropriate notch in the adjusting ring with the position indicator on the shock absorber.

- 1. Spring preload adjusting ring
- 2. Notch

Spring preload setting:

Minimum (soft):

A
Standard:

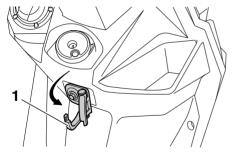

B
Maximum (hard):

C

EALI15306

### Instrument and control functions

#### Luggage holder

1. Luggage holder

Pull the luggage holder outward, then move the top portion of the luggage holder as shown in order to hook items on it

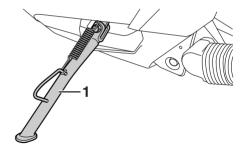

EWAT1091

FΔI IT3482

#### **WARNING**

- Do not exceed the load limit of 1 kg (2.2 lb) for the luggage holder.
- Do not exceed the maximum load of 158 kg (348 lb) for the vehicle.

#### Sidestand

1. Sidestand

The sidestand is located on the left side of the frame. Raise the sidestand or lower it with your foot while holding the vehicle upright.

#### TIP

The built-in sidestand switch is part of the ignition circuit cut-off system, which cuts the ignition in certain situations. (See the following section for an explanation of the ignition circuit cut-off system.)

EWA10242

#### **WARNING**

The vehicle must not be ridden with the sidestand down, or if the sidestand cannot be properly moved up (or does not stay up), otherwise the sidestand could contact the ground and distract the operator, resulting in a possible loss of control. Yamaha's ignition circuit cut-off system has been designed to assist the operator in fulfilling the responsibility of raising the sidestand before starting off. Therefore, check this system regularly and have a Yamaha dealer repair it if it does not function properly.

FAU66751

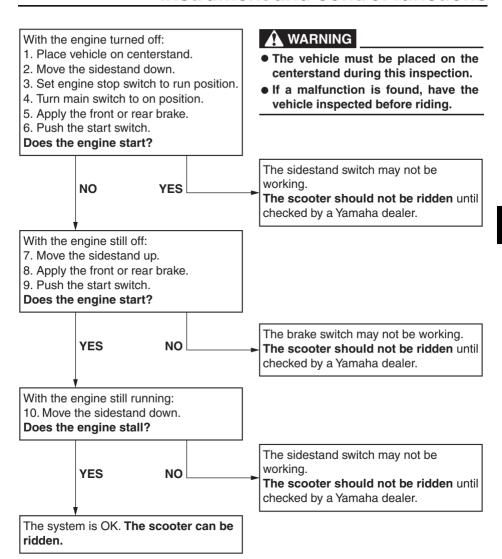

#### Ignition circuit cut-off system

This system prevents engine starts unless the sidestand is up. Also, it will stop the running engine should the sidestand be lowered.

Periodically check the system via the following procedure.

#### TIP\_\_\_\_

- This check is most reliable if performed with a warmed-up engine.
- See pages 4-1 and 4-6 for switch operation information.

## For your safety - pre-operation checks

FAU63441

Inspect your vehicle each time you use it to make sure the vehicle is in safe operating condition. Always follow the inspection and maintenance procedures and schedules described in the Owner's Manual.

EWA11152

#### **WARNING**

Failure to inspect or maintain the vehicle properly increases the possibility of an accident or equipment damage. Do not operate the vehicle if you find any problem. If a problem cannot be corrected by the procedures provided in this manual, have the vehicle inspected by a Yamaha dealer.

Before using this vehicle, check the following points:

ITEM	CHECKS	PAGE
Fuel	Check fuel level in fuel tank. Refuel if necessary. Check fuel line for leakage. Check fuel tank breather hose and overflow hose for obstructions, cracks or damage, and check hose connections.	4-9, 4-10
Engine oil	<ul> <li>Check oil level in engine.</li> <li>If necessary, add recommended oil to specified level.</li> <li>Check vehicle for oil leakage.</li> </ul>	7-10
Final transmission oil	Check vehicle for oil leakage.	7-12
Front brake	Check operation. If soft or spongy, have Yamaha dealer bleed hydraulic system. Check brake pads for wear. Replace if necessary. Check fluid level in reservoir. If necessary, add specified brake fluid to specified level. Check hydraulic system for leakage.	7-19, 7-20, 7-21
Rear brake	Check operation. If soft or spongy, have Yamaha dealer bleed hydraulic system. Check brake pads for wear. Replace if necessary. Check fluid level in reservoir. If necessary, add specified brake fluid to specified level. Check hydraulic system for leakage.	7-19, 7-20, 7-21
Throttle grip	Make sure that operation is smooth.     Check throttle grip free play.     If necessary, have Yamaha dealer adjust throttle grip free play and lubricate cable and grip housing.	7-16, 7-23
Control cables	Make sure that operation is smooth.     Lubricate if necessary.	7-22

## For your safety – pre-operation checks

ITEM	CHECKS	PAGE
Wheels and tires	Check for damage. Check tire condition and tread depth. Check air pressure. Correct if necessary.	7-17, 7-19
Brake levers	Make sure that operation is smooth.     Lubricate lever pivoting points if necessary.	7-23
Centerstand, sidestand	Make sure that operation is smooth.     Lubricate pivots if necessary.	7-24
Chassis fasteners	<ul> <li>Make sure that all nuts, bolts and screws are properly tightened.</li> <li>Tighten if necessary.</li> </ul>	_
Instruments, lights, signals and switches	Check operation.     Correct if necessary.	
Sidestand switch	Check operation of ignition circuit cut-off system.     If system is not working correctly, have Yamaha dealer check vehicle.	4-15

## Operation and important riding points

FAI 115052

Read the Owner's Manual carefully to become familiar with all controls. If there is a control or function you do not understand, ask your Yamaha dealer.

EWA10272

### **WARNING**

Failure to familiarize yourself with the controls can lead to loss of control, which could cause an accident or injury.

#### **Engine break-in**

There is never a more important period in the life of your engine than the period between 0 and 1000 km (600 mi). For this reason, you should read the following material carefully.

Since the engine is brand new, do not put an excessive load on it for the first 1000 km (600 mi). The various parts in the engine wear and polish themselves to the correct operating clearances. During this period, prolonged full-throttle operation or any condition that might result in engine overheating must be avoided.

FAUT3541

FΔI 116831

#### 0-150 km (0-90 mi)

Avoid prolonged operation above 1/3 throttle.

After every hour of operation, stop the engine, and then let it cool for five to ten minutes

Vary the engine speed from time to time. Do not operate the engine at one set throttle position.

#### 150-500 km (90-300 mi)

Avoid prolonged operation above 1/2 throttle

#### 500-1000 km (300-600 mi)

Avoid prolonged operation above 3/4 throttle. *NOTICE:* After 1000 km (600 mi) of operation, be sure to change the engine oil and final transmission oil, and to clean the oil strainer. IECA165021

# Operation and important riding points

#### 1000 km (600 mi) and beyond

Avoid prolonged full-throttle operation. Vary the engine speed occasionally.

FCA10271

#### **NOTICE**

If any engine trouble should occur during the engine break-in period, immediately have a Yamaha dealer check the vehicle

#### Starting the engine

The ignition circuit cut-off system will enable starting when the sidestand is be up.

#### To start the engine

- 1. Turn the main switch on and set the engine stop switch to the run position.
- 2. Confirm the indicator and warning light(s) come on for a few seconds, and the go off. (See page 4-3.)

#### TIP

Do not start the engine if the engine trouble warning light remains on.

ECA26710

EALIS6730

#### **NOTICE**

Do not continue to operate the vehicle if a warning light remains on. Have a Yamaha dealer check the vehicle.

- 3. Close the throttle completely.
- 4. While applying the front or rear brake, push the start switch.
- Release the start switch when the engine starts, or after 5 seconds. Wait 10 seconds before pressing the switch again to allow battery voltage to restore.

ECA11043

#### **NOTICE**

For maximum engine life, never accelerate hard when the engine is cold!

#### 6

# Operation and important riding points

FAI M5312

EAU45312

TIP\_

This model is equipped with a lean angle sensor to stop the engine in case of a turnover. In this case, turn the main switch off and then on. Failing to do so will prevent the engine from starting even though the engine will crank when pushing the start switch.

Starting off

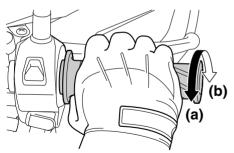

EAU45093

- 1. While pulling the rear brake lever with your left hand and holding the grab bar with your right hand, push the scooter off the centerstand
- 2. Sit astride the seat, and then adjust the rear view mirrors.
- 3. Switch the turn signals on.
- 4. Check for oncoming traffic, and then slowly turn the throttle grip (on the right) in order to take off.
- 5. Switch the turn signals off.

#### 6

# Operation and important riding points

# Acceleration and deceleration

The speed can be adjusted by opening and closing the throttle. To increase the speed, turn the throttle grip in direction (a). To reduce the speed, turn the throttle grip in direction (b).

#### **Braking**

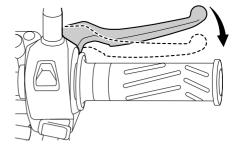

FAU60650

EW/ 17700

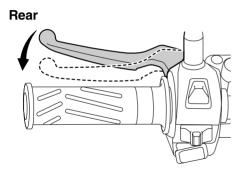

#### **WARNING**

- Avoid braking hard or suddenly (especially when leaning over to one side), otherwise the vehicle may skid or overturn.
- Railroad crossings, streetcar rails, iron plates on road construction sites, and manhole covers become extremely slippery when wet. Therefore, slow down when approaching such areas and cross them with caution.
- Keep in mind that braking on a wet road is much more difficult.
- Ride slowly down a hill, as braking downhill can be very difficult.
- 1. Close the throttle completely.
- 2. Apply both front and rear brakes simultaneously while gradually increasing the pressure.

#### **Front**

# Operation and important riding points

Tips for reducing fuel consumption

Fuel consumption depends largely on your riding style. Consider the following tips to reduce fuel consumption:

EAU16821

- Avoid high engine speeds during acceleration.
- Avoid high engine speeds with no load on the engine.
- Turn the engine off instead of letting it idle for an extended length of time (e.g., in traffic jams, at traffic lights or at railroad crossings).

# Operation and important riding points

EAU17214

#### **Parking**

When parking, stop the engine, and then remove the key from the main switch

EWA10312

#### **WARNING**

- Since the engine and exhaust system can become very hot, park in a place where pedestrians or children are not likely to touch them and be burned.
- Do not park on a slope or on soft ground, otherwise the vehicle may overturn, increasing the risk of a fuel leak and fire.
- Do not park near grass or other flammable materials which might catch fire.

FAUS1824

Periodic inspection, adjustment, and lubrication will keep your vehicle in the safest and most efficient condition possible. Safety is an obligation of the vehicle owner/operator. The most important points of vehicle inspection, adjustment, and lubrication are explained on the following pages.

The intervals given in the periodic maintenance charts should be simply considered as a general guide under normal riding conditions. However, depending on the weather, terrain, geographical location, and individual use, the maintenance intervals may need to be shortened.

EWA10322

## **MARNING**

Failure to properly maintain the vehicle or performing maintenance activities incorrectly may increase your risk of injury or death during service or while using the vehicle. If you are not familiar with vehicle service, have a Yamaha dealer perform service.

EWA15123

#### **WARNING**

Turn off the engine when performing maintenance unless otherwise specified.

- A running engine has moving parts that can catch on body parts or clothing and electrical parts that can cause shocks or fires.
- Running the engine while servicing can lead to eye injury, burns, fire, or carbon monoxide poisoning – possibly leading to

death. See page 2-2 for more information about carbon monoxide

EWA10331

## **WARNING**

This scooter is designed for use on paved roads only. If this scooter is operated in abnormally dusty, muddy or wet conditions, the air filter element should be cleaned or replaced more frequently, otherwise rapid engine wear may result. Consult a Yamaha dealer for proper maintenance intervals.

EWA15461

#### **WARNING**

Brake discs, calipers, drums, and linings can become very hot during use. To avoid possible burns, let brake components cool before touching them.

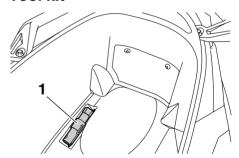

EALI85230

# Periodic maintenance and adjustment

FΔ1117303

Emission controls not only function to ensure cleaner air, but are also vital to proper engine operation and maximum performance. In the following periodic maintenance charts, the services related to emissions control are grouped separately. These services require specialized knowledge. data. equipment. Maintenance, replacement. or repair of the emission control devices and systems may be performed by any repair establishment or individual that is certified (if applicable). Yamaha dealers are trained and equipped to perform these particular services.

#### Tool kit

1. Tool kit

The tool kit is in the location shown.

The information included in this manual and the tools provided in the tool kit are intended to assist you in the performance of preventive maintenance and minor repairs. However, a torque wrench and other tools are necessary to perform certain maintenance work correctly.

#### TIP

If you do not have the tools or experience required for a particular job, have your Yamaha dealer perform it for you.

EΔI 148451

#### TIP

- From 12000 mi (19000 km) or 36 months, repeat the maintenance intervals starting from 4000 mi (7000 km) or 12 months.
- Items marked with an asterisk require special tools, data and technical skills, have a Yamaha dealer perform the service.

EAU69071

#### 7

# Periodic maintenance and adjustment

FΔI IT4341

#### TIP

- Air filters
  - This model uses disposable-type oil-coated paper air filter element. Cleaning it with compressed air will damage it. Replace only.
  - Service the air filter elements more frequently when riding in unusually wet or dusty areas.
- Hydraulic brake service
  - Regularly check the brake fluid levels and fill the reservoirs as required.
  - Replace the internal components of the brake master cylinders and calipers, and change the brake fluid every two years.
  - Replace the brake hoses every four years or sooner if cracked or damaged.

# Removing and installing panels

The panels shown need to be removed to perform some of the maintenance jobs described in this chapter. Refer to this section each time a panel needs to be removed and installed.

- 1. Panel A
- 2. Panel B

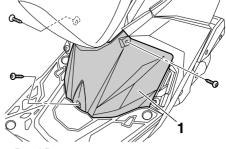

EAU18773

and then install the screws

#### Panel B

#### To remove the panel

- 1. Open the seat. (See page 4-11.)
- 2. Remove the screws, and then take the panel off.

1. Panel B

#### To install the panel

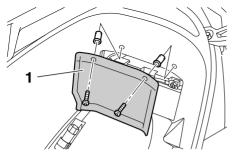

Place the panel in the original position, and then install the screws.

EAUT5031

#### Panel A

#### To remove the panel

- 1. Open the seat. (See page 4-11.)
- 2. Remove the screws, and then take the panel off.

1. Panel A

#### To install the panel

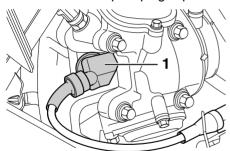

Place the panel in the original position,

Checking the spark plug

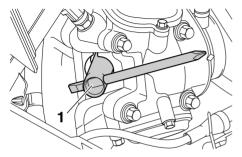

The spark plug is an important engine component, which is easy to check. Since heat and deposits will cause any spark plug to slowly erode, the spark plug should be removed and checked in accordance with the periodic maintenance and lubrication chart. In addition, the condition of the spark plug can reveal the condition of the engine.

#### To remove the spark plug

- 1. Place the vehicle on the centerstand.
- 2. Remove panel B. (See page 7-7.)
- 3. Remove the spark plug cap.

- 1. Spark plug cap
  - 4. Remove the spark plug as shown, with the spark plug wrench included in the tool kit.

1. Spark plug wrench

#### To check the spark plug

1. Check that the porcelain insulator around the center electrode of the spark plug is a medium-to-light tan (the ideal color when the vehicle is ridden normally).

#### TIP

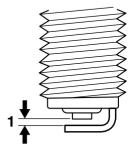

FΔI IT1838

If the spark plug shows a distinctly different color, the engine could be operating improperly. Do not attempt to diagnose such problems yourself. Instead, have a Yamaha dealer check the vehicle

Check the spark plug for electrode erosion and excessive carbon or other deposits, and replace it if necessary.

#### Specified spark plug: DENSO / U22ESR-N

3. Measure the spark plug gap with a wire thickness gauge and, if necessary, adjust the gap to specification

Spark plug gap

# **Spark plug gap:** 0.7–0.8 mm (0.028–0.031 in)

#### To install the spark plug

1. Clean the surface of the spark plug gasket and its mating surface, and

then wipe off any grime from the spark plug threads.

2. Install the spark plug with the spark plug wrench, and then tighten it to the specified torque.

#### **Tightening torque:**

Spark plug:

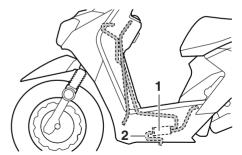

13 N·m (1.3 kgf·m, 9.4 lb·ft)

#### TIP

If a torque wrench is not available when installing a spark plug, a good estimate of the correct torque is 1/4–1/2 turn past finger tight. However, the spark plug should be tightened to the specified torque as soon as possible.

- 3. Install the spark plug cap.
- 4. Install the panel.

#### Canister

FΔI 182180

- 1. Canister
- 2. Canister breather hose

This model is equipped with a canister to prevent the discharging of fuel vapor into the atmosphere. Before operating this vehicle, make sure to check the following:

- each hose connection, tighten if loose.
- each hose and the canister body for damage, replace if damaged.
- the canister breather hose is not blocked off, clean if necessary.

Engine oil and oil strainer

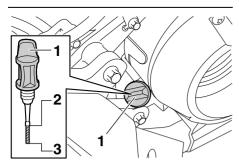

The engine oil level should be checked before each ride. In addition, the oil must be changed and the oil strainer cleaned at the intervals specified in the periodic maintenance and lubrication chart

#### To check the engine oil level

- Place the scooter on the centerstand. A slight tilt to the side can result in a false reading.
- Start the engine, warm it up for several minutes, and then turn it off
- Wait a few minutes until the oil settles, remove the oil filler cap, wipe the dipstick clean, insert it back into the oil filler hole (without screwing it in), and then remove it again to check the oil level.

#### TIP

The engine oil should be between the minimum and maximum level marks.

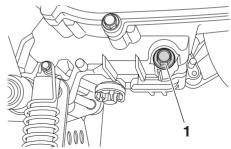

- 1. Engine oil filler cap
- 2. Minimum level mark
- 3. Maximum level mark
  - If the engine oil is below the minimum level mark, add sufficient oil
    of the recommended type to raise
    it to the correct level.

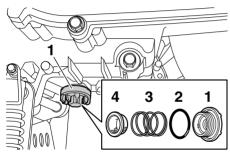

Insert the dipstick into the oil filler hole, and then tighten the oil filler cap.

# To change the engine oil and clean the oil strainer

- Start the engine, warm it up for several minutes, and then turn it off.
- 2. Place an oil pan under the engine to collect the used oil.
- 3. Remove the engine oil filler cap and the engine oil drain bolts A and B to drain the oil from the crankcase. *NOTICE:* When removing the engine oil drain bolt B, the O-ring, compression spring, and oil strainer will fall out. Take care not to lose these parts.[ECAT1022]

1. Engine oil drain bolt A

- 1. Engine oil drain bolt B
- 2. O-ring
- 3. Compression spring
- 4. Oil strainer
  - 4. Clean the oil strainer with solvent, and then check it for damage and replace it if necessary.
  - 5. Check the O-ring for damage and replace it if necessary.
  - Install the oil strainer, compression spring, O-ring and engine oil drain bolt B.

#### TIP

Make sure that the O-ring is properly seated.

7. Install engine oil drain bolt A, and then tighten both drain bolts to their specified torques.

#### **Tightening torque:**

Engine oil drain bolt A: 23 Nm (2.3 m·kgf, 16.6 ft·lbf) Engine oil drain bolt B: 20 Nm (2.0 m·kgf, 14.5 ft·lbf)

 Refill with the specified amount of the recommended engine oil, and then install and tighten the oil filler cap.

#### Recommended engine oil:

See page 9-1.

Oil change quantity:

0.85 L (0.90 US qt, 0.75 Imp.qt)

ECA24060

#### NOTICE

# Make sure that no foreign material enters the crankcase.

- Start the engine, and then let it idle for several minutes while checking it for oil leakage. If oil is leaking, immediately turn the engine off and check for the cause.
- Turn the engine off, and then check the oil level and correct it if necessary.
- Reset the oil change indicator and oil change tripmeter. (See page 4-3.)

Why Yamalube

EALI85450

YAMALUBE oil is a Genuine YAMAHA Part born of the engineers' passion and belief that engine oil is an important liguid engine component. We form teams of specialists in the fields of mechanical engineering, chemistry, electronics and track testing, and have them develop the engine together with the oil it will use. Yamalube oils take full advantage of the base oil's qualities and blend in the ideal balance of additives to make sure the final oil clears our performance standards. Thus. Yamalube mineral. semisynthetic and synthetic oils have their own distinct characters and value Yamaha's experience gained over many years of research and development into oil since the 1960's helps make Yamalube the best choice for your Yamaha engine.

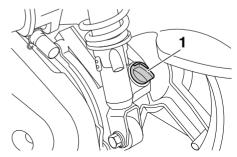

Final transmission oil

EAU20067

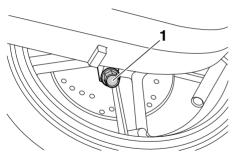

The final transmission case must be checked for oil leakage before each ride. If any leakage is found, have a Yamaha dealer check and repair the scooter. In addition, the final transmission oil must be changed as follows at the intervals specified in the periodic maintenance and lubrication chart.

- 1. Start the engine, warm up the final transmission oil by riding the scooter for several minutes, and then stop the engine.
- Place the scooter on the centerstand.
- Place an oil pan under the final transmission case to collect the used oil
- Remove the final transmission oil filler cap and its O-ring from the final transmission case.

1. Final transmission oil filler cap

Remove the final transmission oil drain bolt and its gasket to drain the oil from the final transmission case.

- 1. Final transmission oil drain bolt
  - Install the final transmission oil drain bolt and its new gasket, and then tighten the bolt to the specified torque.

#### **Tightening torque:**

Final transmission oil drain bolt: 23 Nm (2.3 m·kgf, 16.6 ft·lbf)

7. Refill with the specified amount of the recommended final transmission oil. WARNING! Make sure that no foreign material enters the final transmission case. Make sure that no oil gets on the tire or wheel. [EWA11312]

# Recommended final transmission oil:

See page 9-1.

Oil quantity:

0.13 L (0.14 US qt, 0.11 Imp.qt)

- 8. Install the final transmission oil filler cap and its new O-ring, and then tighten the oil filler cap.
- Check the final transmission case for oil leakage. If oil is leaking, check for the cause.

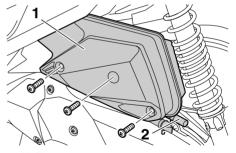

It case air

# Air filter and V-belt case air filter elements

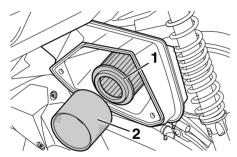

The air filter and V-belt case air filter elements should be cleaned or replaced at the intervals specified in the periodic maintenance and lubrication chart. Check both filter elements more frequently if you are riding in unusually wet or dusty areas. The air filter check hose must be frequently checked and cleaned if necessary.

#### Replacing the air filter element

- Place the scooter on the centerstand
- 2. Remove the air filter case cover by removing the screws.

- 1. Air filter case cover
- 2. Air filter check hose
  - 3. Pull the air filter element out.
  - 4. Remove the air filter element outer sponge from the air filter element, and then clean it with water. After cleaning, remove the water by squeezing the sponge. NOTICE: To avoid damaging the sponge, handle it gently and carefully, and do not twist it. [ECAT1320]

- 1 Air filter element
- 2. Air filter element outer sponge

FCAT1330

#### **NOTICE**

Replace the air filter element outer sponge if it is damaged or cannot be cleaned with water.

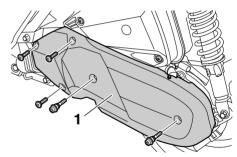

- 5. Insert a new air filter element with the sponge into the air filter case. NOTICE: Make sure that the air filter element is properly seated in the air filter case. The engine should never be operated without the air filter element installed, otherwise the piston(s) and/or cylinder(s) may become excessively worn. [ECA10482]
- 6. Install the air filter case cover by installing the screws.

#### Cleaning the air filter check hose

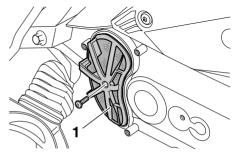

- Check the hose on the rear side of the air filter case for accumulated dirt or water
- 2. If dirt or water is visible, remove the hose, clean it, and then install it.

# Cleaning the V-belt case air filter element

 Remove the V-belt air filter case cover by removing the screws.

- V-belt air filter case cover
  - 2. Remove the filter element holder by removing the screw.

- 1. V-belt case air filter element holder
  - 3. Pull the air filter element out, and then clean it with solvent. After cleaning, remove the remaining solvent by squeezing the element. WARNING! Use only a dedicated parts cleaning solvent. To avoid the risk of fire or explosion, do not use gasoline or solvents with а low flash point.[EWA10431] NOTICE: To avoid damaging the air filter element, handle it gently and carefully, and do not twist it. IECA105221

- 1. V-belt case air filter element
  - Apply oil of the recommended type to the entire surface of the sponge material, and then squeeze the excess oil out

#### TID

The air filter element should be wet but not dripping.

#### Recommended oil:

Yamaha foam air filter oil or other quality foam air filter oil

- 5. Insert the element into the air filter case.
- 6. Install the filter element holder by installing the screw.
- 7. Install the V-belt air filter case cover by installing the screws.

# Checking the engine idling speed

Check the engine idling speed and, if necessary, have it corrected by a Yamaha dealer

Engine idling speed: 1600–1800 r/min

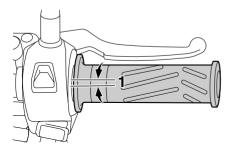

#### \_

FΔI 121403

# Periodic maintenance and adjustment

# Checking the throttle grip free play

Measure the throttle grip free play as shown

1. Throttle grip free play

Throttle grip free play: 3.0–5.0 mm (0.12–0.20 in)

Periodically check the throttle grip free play and, if necessary, have a Yamaha dealer adjust it.

#### Valve clearance

The valves are an important engine component, and since valve clearance changes with use, they must be checked and adjusted at the intervals specified in the periodic maintenance chart. Unadjusted valves can result in improper air-fuel mixture, engine noise, and eventually engine damage. To prevent this from occurring, have your Yamaha dealer check and adjust the valve clearance at regular intervals.

#### TIP

This service must be performed when the engine is cold.

FAU61783

**Tires** 

Tires are the only contact between the vehicle and the road. Safety in all conditions of riding depends on a relatively small area of road contact. Therefore, it is essential to maintain the tires in good condition at all times and replace them at the appropriate time with the specified tires.

#### Tire air pressure

The tire air pressure should be checked and, if necessary, adjusted before each ride.

EWA10504

## **WARNING**

Operation of this vehicle with improper tire pressure may cause severe injury or death from loss of control.

- The tire air pressure must be checked and adjusted on cold tires (i.e., when the temperature of the tires equals the ambient temperature).
- The tire air pressure must be adjusted in accordance with the riding speed and with the total weight of rider, passenger, cargo, and accessories approved for this model.

#### Cold tire air pressure: Up to 90 kg (198 lb) load:

Front:

175 kPa (1.75 kgf/cm<sup>2</sup>, 25 psi)

Rear

200 kPa (2.00 kgf/cm<sup>2</sup>, 29 psi) 90 kg (198 lb) to maximum load:

Front:

200 kPa (2.00 kgf/cm<sup>2</sup>, 29 psi)

Rear:

225 kPa (2.25 kgf/cm<sup>2</sup>, 33 psi)

#### Maximum load:

Vehicle:

158 kg (348 lb)

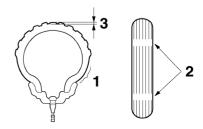

The vehicle's maximum load is the combined weight of the rider, passenger, cargo, and any accessories.

EWA10512

## **WARNING**

Never overload your vehicle. Operation of an overloaded vehicle could cause an accident.

#### Tire inspection

- 1 Tire sidewall
- 2. Tire wear indicator
- 3. Tire tread depth

The tires must be checked before each ride. If a tire tread shows crosswise lines (minimum tread depth), if the tire has a nail or glass fragments in it, or if the sidewall is cracked, contact a Yamaha dealer immediately and have the tire replaced.

Minimum tire tread depth (front and rear):

1.0 mm (0.04 in)

EWA10523

#### **WARNING**

- It is dangerous to ride with a worn-out tire. When a tire tread begins to show crosswise lines, have a Yamaha dealer replace the tire immediately. Brakes, tires and related wheel parts replacement should also be left to a Yamaha dealer.
- Ride at moderate speeds after changing a tire since the tire surface must first be "broken in" for it to develop its optimal characteristics.

#### Tire information

This model is equipped with tubeless tires and tire air valves

Tires age, even if they have not been used or have only been used occasionally. Cracking of the tread and sidewall rubber, sometimes accompanied by carcass deformation, is an evidence of ageing. Old and aged tires shall be checked by tire specialists to ascertain their suitability for further use.

EWA10462

#### **WARNING**

The front and rear tires should be of the same make and design, otherwise the handling characteristics of the vehicle may be different, which could lead to an accident.

After extensive tests, only the tires listed below have been approved for this model by Yamaha.

#### Front tire:

Size:

120 / 70 - 12 51L Manufacturer/model: KENDA / K761A

#### Rear tire:

Size:

130 / 70 - 12 56L Manufacturer/model: KENDA / K761

EAU21963

**Cast wheels** 

To maximize the performance, durability, and safe operation of your vehicle, note the following points regarding the specified wheels.

- The wheel rims should be checked for cracks, bends, warpage or other damage before each ride. If any damage is found, have a Yamaha dealer replace the wheel. Do not attempt even the smallest repair to the wheel. A deformed or cracked wheel must be replaced.
- The wheel should be balanced whenever either the tire or wheel has been changed or replaced. An unbalanced wheel can result in poor performance, adverse handling characteristics, and a shortened tire life

EAU50861

# Checking the front and rear brake lever free play

There should be no free play at the brake lever ends. If there is free play, have a Yamaha dealer inspect the brake system.

FWA14212

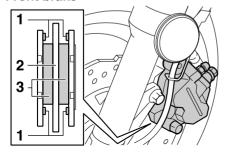

## **WARNING**

A soft or spongy feeling in the brake lever can indicate the presence of air in the hydraulic system. If there is air in the hydraulic system, have a Yamaha dealer bleed the system before operating the vehicle. Air in the hydraulic system will diminish the braking performance, which may result in loss of control and an accident.

# Checking the front and rear brake pads

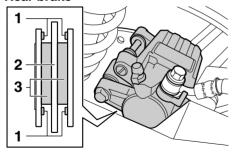

have a Yamaha dealer replace the brake pads as a set.

#### Front brake

- 1. Brake pad wear indicator
- 2. Brake disc
- 3. Brake pad

#### Rear brake

- 1. Brake pad wear indicator
- 2. Brake disc
- 3. Brake pad

The front and rear brake pads must be checked for wear at the intervals specified in the periodic maintenance and lubrication chart. Each brake pad is provided with a wear indicator, which allows you to check the brake pad wear without having to disassemble the brake. To check the brake pad wear, check the position of the wear indicator while applying the brake. If a brake pad has worn to the point that the wear indicator almost touches the brake disc,

FΔI 122583

Checking the brake fluid level

Before riding, check that the brake fluid is above the minimum level mark. Check the brake fluid level with the reservoir in an upright position. Replenish the brake fluid if necessary.

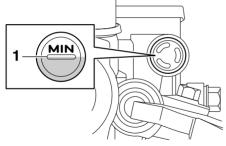

Specified brake fluid: DOT 4

ECA17641

#### NOTICE

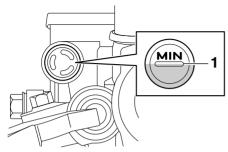

Brake fluid may damage painted surfaces or plastic parts. Always clean up spilled fluid immediately.

#### Front brake

1 Minimum level mark

#### Rear brake

1. Minimum level mark

As the brake pads wear, it is normal for the brake fluid level to gradually go down.

- A low brake fluid level may indicate worn brake pads or brake system leakage; therefore, be sure to check the brake pads for wear and the brake system for leakage.
- If the brake fluid level goes down suddenly, have a Yamaha dealer check the cause before further riding.

EWA15991

#### **WARNING**

Improper maintenance can result in loss of braking ability. Observe these precautions:

- Insufficient brake fluid may allow air to enter the brake system, reducing braking performance.
- Clean the filler cap before removing. Use only DOT 4 brake fluid from a sealed container.
- Use only the specified brake fluid; otherwise, the rubber seals may deteriorate, causing leakage.
- Refill with the same type of brake fluid. Adding a brake fluid other than DOT 4 may result in a harmful chemical reaction.
- Be careful that water does not enter the brake fluid reservoir when refilling. Water will significantly lower the boiling point of the fluid and may result in vapor lock.

Changing the brake fluid

Have a Yamaha dealer change the brake fluid every 2 years. In addition, have the seals of the master cylinders and brake calipers, as well as the brake hoses replaced at the intervals listed below or sooner if they are damaged or leaking.

Brake seals: every 2 years

• Brake hoses: every 4 years

EALI23098

# Checking and lubricating the cables

The operation of all control cables and the condition of the cables should be checked before each ride, and the cables and cable ends should be lubricated if necessary. If a cable is damaged or does not move smoothly, have a Yamaha dealer check or replace it. WARNING! Damage to the outer housing of cables may result in internal rusting and cause interference with cable movement. Replace damaged cables as soon as possible prevent unsafe conditions. [EWA10712]

#### **Recommended Jubricant:**

Yamaha cable lubricant or other suitable cable lubricant

Checking and lubricating the

throttle grip and cable
The operation of the throttle grip should be checked before each ride. In addition, the cable should be lubricated by a Yamaha dealer at the intervals specified in the periodic maintenance chart.

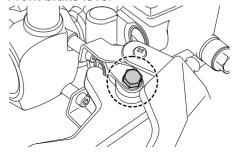

The throttle cable is equipped with a

rubber cover. Make sure that the cover is securely installed. Even though the cover is installed correctly, it does not completely protect the cable from water entry. Therefore, use care not to pour water directly onto the cover or cable when washing the vehicle. If the cable or cover becomes dirty, wipe clean with a moist cloth

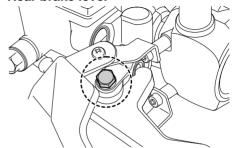

EAU23173

# Lubricating the front and rear brake levers

#### Front brake lever

#### Rear brake lever

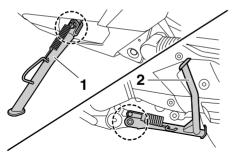

The pivoting points of the front and rear brake levers must be lubricated at the intervals specified in the periodic maintenance and lubrication chart.

**Recommended lubricant:** 

Silicone grease

# Checking and lubricating the centerstand and sidestand

- 1. Sidestand
- 2. Centerstand

The operation of the centerstand and sidestand should be checked before each ride, and the pivots and metal-to-metal contact surfaces should be lubricated if necessary.

**WARNING** 

EWA10742

If the centerstand or sidestand does not move up and down smoothly, have a Yamaha dealer check or repair it. Otherwise, the centerstand or sidestand could contact the ground and distract the operator, resulting in a possible loss of control.

Recommended lubricant: Lithium-soap-based grease

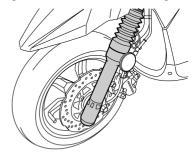

#### Checking the front fork

The condition and operation of the front fork must be checked as follows at the intervals specified in the periodic maintenance and lubrication chart.

EALIOSOTS

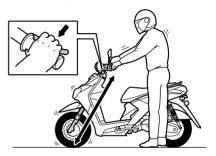

#### To check the condition

Check the inner tubes for scratches, damage and excessive oil leakage.

#### To check the operation

- Place the vehicle on a level surface and hold it in an upright position. WARNING! To avoid injury, securely support the vehicle so there is no danger of it falling over. IEWA107521
- While applying the front brake, push down hard on the handlebars several times to check if the front fork compresses and rebounds smoothly.

NOTICE

If any damage is found or the front fork does not operate smoothly. have a Yamaha dealer check or repair it.

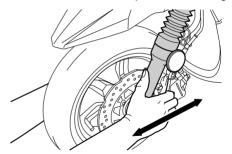

ECA10591

## Checking the steering

Worn or loose steering bearings may cause danger. Therefore, the operation of the steering must be checked as follows at the intervals specified in the periodic maintenance and lubrication chart

FΔI M5512

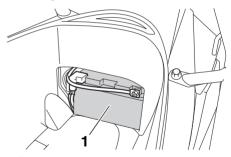

- 1. Place the vehicle on the centerstand. WARNING! To avoid injury, securely support the vehicle so there is no danger of it falling over.[EWA10752]
- 2. Hold the lower ends of the front fork leas and try to move them forward and backward. If any free play can be felt, have a Yamaha dealer check or repair the steering.

# Checking the wheel bearings

The front and rear wheel bearings must be checked at the intervals specified in the periodic maintenance and lubrication chart. If there is play in the wheel hub or if the wheel does not turn smoothly, have a Yamaha dealer check the wheel bearings.

#### **Battery**

1. Battery

The battery is located behind panel A. (See page 7-7.)

This model is equipped with a VRLA (Valve Regulated Lead Acid) battery. There is no need to check the electrolyte or to add distilled water. However, the battery lead connections need to be checked and, if necessary, securely tightened.

EWA10761

FΔI IT4120

#### **WARNING**

- Electrolyte is poisonous and dangerous since it contains sulfuric acid, which causes severe burns. Avoid any contact with skin, eyes or clothing and always shield your eyes when working near batteries. In case of contact, administer the following FIRST AID.
  - EXTERNAL: Flush with plenty of water.
  - INTERNAL: Drink large quantities of water or milk and immediately call a physician.
  - EYES: Flush with water for 15 minutes and seek prompt medical attention.
- Batteries produce explosive hydrogen gas. Therefore, keep

sparks, flames, cigarettes, etc., away from the battery and provide sufficient ventilation when charging it in an enclosed space.

 KEEP THIS AND ALL BATTER-IES OUT OF THE REACH OF CHILDREN.

#### To charge the battery

Have a Yamaha dealer charge the battery as soon as possible if it seems to have discharged. Keep in mind that the battery tends to discharge more quickly if the vehicle is equipped with optional electrical accessories

ECA16522

#### NOTICE

To charge a VRLA (Valve Regulated Lead Acid) battery, a special (constant-voltage) battery charger is required. Using a conventional battery charger will damage the battery.

#### To store the battery

- If the model will not be used for more than one month, remove the battery, fully charge it, and then place it in a cool, dry place. NOTICE: When removing the battery, be sure the key is turned to "OFF", then disconnect the negative lead before disconnecting the positive lead. [ECA16303]
- If the battery will be stored for more than two months, check it at least once a month and fully charge it if necessary.
- 3. Fully charge the battery before installation. **NOTICE:** When install-

- ing the battery, be sure the key is turned to "OFF", then connect the positive lead before connecting the negative lead.[ECA16841]
- 4. After installing the battery, make sure that the battery leads are properly connected to the battery terminals
- Turn the key from "ON" to "OFF" three times in three-second intervals to initialize the idle speed control system.

ECA16531

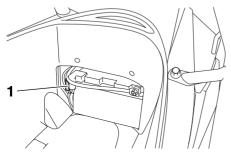

#### NOTICE

Always keep the battery charged. Storing a discharged battery can cause permanent battery damage.

#### Replacing the fuses

#### Main fuse

The main fuse is located behind panel A. (See page 7-7.)

1. Main fuse

If the main fuse is blown, replace it as follows.

- 1. Turn the key to "OFF".
- Remove the blown fuse, and then install a new fuse of the specified amperage. WARNING! Do not use a fuse of a higher amperage rating than recommended to avoid causing extensive damage to the electrical system and possibly a fire. [EWA15132]

#### Specified fuses:

Main fuse: 20.0 A

- 3. Turn the key to "ON" to check if the vehicle operates normally. If the main fuse immediately blows again, have a Yamaha dealer check the electrical system.
- 4. After removing and installing the main fuse, turn the main switch from "ON" to "OFF" three times in three-second intervals to initialize the idle speed control system.

#### Fuse box

EALITS041

The fuse box, which contains the fuses for the ignition, signal, and headlights, as well as the back-up fuse for the multi-function meter unit, is located behind the headlights. Have a Yamaha dealer check and replace these fuses if necessary.

# Specified fuses: Headlight fuse: 10.0 A Signaling system fuse: 10.0 A Ignition fuse: 7.5 A Backup fuse: 7.5 A

Replacing a headlight bulb

This model is equipped with halogen bulb headlights. If a headlight bulb burns out, have a Yamaha dealer replace it and, if necessary, adjust the headlight beam.

#### **Auxiliary light bulb**

If the auxiliary light does not come on, have a Yamaha dealer check the electrical circuit or replace the bulb.

FΔI 139021

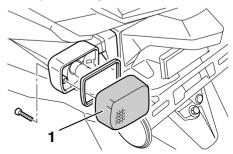

Tail/brake light

If the tail/brake light does not come on, have a Yamaha dealer check its electrical circuit or replace the bulb.

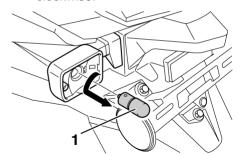

EAU43041

# Replacing a turn signal light bulb

1. Remove the turn signal light lens by removing the screw.

- 1. Turn signal light lens
  - Remove the burnt-out bulb by pushing it in and turning it counterclockwise.

- 1. Turn signal light bulb
  - Insert a new bulb into the socket, push it in, and then turn it clockwise until it stops.
  - 4. Install the lens by installing the screw. *NOTICE:* Do not overtighten the screw, otherwise the lens may break.[ECA11192]

FΔI 12/1331

#### License plate light

If the license plate light does not come on have a Yamaha dealer check the electrical circuit or replace the bulb.

#### **Troubleshooting**

Although your Yamaha received a thorough inspection before shipment from the factory, trouble may occur during operation. Any problem in the fuel, compression, or ignition systems, for example, can cause poor starting and loss of power.

The following troubleshooting chart represents a quick and easy procedure for checking these vital systems yourself. However, should your vehicle require any repair, take it to an authorized Yamaha dealer whose skilled technicians have the necessary tools, experience, and know-how to properly service your Yamaha vehicle.

Be sure to use only genuine Yamaha replacement parts. Although imitation parts may look similar to genuine parts. they are often inferior in quality, have a shorter service life, and can lead to an expensive repair bill later on.

EWA15142

EALI25865

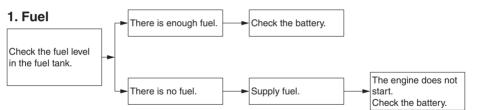

## **⚠** WARNING

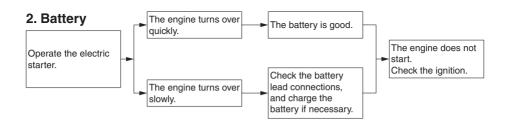

When checking the fuel system, do not smoke, and make sure there are no open flames or sparks in the area, including pilot lights from water heaters or furnaces. Gasoline or gasoline vapors can ignite or explode, causing severe injury or property damage.

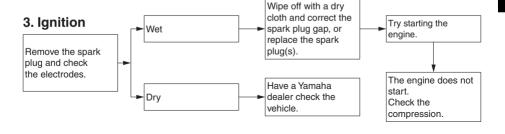

FΔI 167910

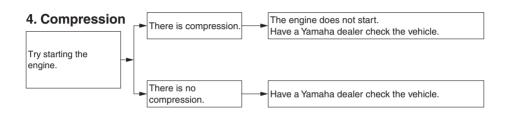

## Periodic maintenance and adjustment

**Troubleshooting chart** 

#### Matte color caution

EAU37834 ECA15193

NOTICE

Some models are equipped with matte colored finished parts. Be sure to consult a Yamaha dealer for advice on what products to use before cleaning the vehicle. Using a brush, harsh chemical products or cleaning compounds when cleaning these parts will scratch or damage their surface. Wax also should not be applied to any matte colored finished parts.

#### Care

Frequent, thorough cleaning of the vehicle will not only enhance its appearance but also will improve its general performance and extend the useful life of many components. Washing, cleaning, and polishing will also give you a chance to inspect the condition of the vehicle more frequently. Be sure to wash the vehicle after riding in the rain or near the sea, because salt is corrosive to metals.

#### TIP

- The roads of heavy snowfall areas may be sprayed with salt as a deicing method. This salt can stay on the roads well into spring, so be sure to wash the underside and chassis parts after riding in such areas
- Genuine Yamaha care and maintenance products are sold under the YAMALUBE brand.
- See your Yamaha dealer for additional cleaning tips.

FCA26280

FAUR3011

#### **NOTICE**

Improper cleaning can cause cosmetic and mechanical damage. Do not use:

 high-pressure washers or steam-jet cleaners. Excessive water pressure may cause water seepage and deterioration of wheel bearings, brakes, transmission seals and electrical devices. Avoid high-pressure detergent applications such as those available in coin-operated car washers.

- harsh chemicals, including strong acidic wheel cleaners, especially on spoke or magnesium wheels.
- harsh chemicals, abrasive cleaning compounds, or wax on matte-finished parts. Brushes can scratch and damage the matte-finish, use soft sponge or towel only.
- towels, sponges, or brushes contaminated with abrasive cleaning products or strong chemicals such as, solvents, gasoline, rust removers, brake fluid, or antifreeze, etc.

#### **Before washing**

- Park the vehicle out of direct sunlight and allow it to cool. This will help avoid water spots.
- 2. Make sure all caps, covers, electrical couplers and connectors are tightly installed.
- 3. Cover the muffler end with a plastic bag and a strong rubber band.
- Pre-soak stubborn stains like insects or bird droppings with a wet towel for a few minutes.
- Remove road grime and oil stains with a biodegradable degreaser (YAMACLEAN Pro-Wash Spray) and a plastic-bristle brush or sponge. NOTICE: Do not use degreasing agent on areas requiring lubrication such as seals, gaskets, and wheel axles. Follow product instructions. IECA262901

#### Washing

 Rinse off any degreaser and spray down the vehicle with a garden

- hose. Use only enough pressure to do the job. Avoid spraying water directly into the muffler, instrument panel, air inlet, or other inner areas such as underseat storage compartments.
- 2. Wash the vehicle with a quality automotive-type detergent (YAMALUBE Wash & Wax) mixed with cool water and a soft, clean towel or sponge. Use an old toothbrush or plastic-bristle brush for hard-to-reach places. NOTICE: Use cold water if the vehicle has been exposed to salt. Warm water will increase salt's corrosive properties.[ECA26301]
- 3. For windshield-equipped vehicles: Clean the windshield with a soft towel or sponge dampened with water and a pH neutral detergent. If necessary, use a high-quality windshield cleaner (YAMACLEAN Glass Cleaner) or windshield polish. NOTICE: Never use any strong chemicals to clean the windshield. Additionally, some cleaning compounds for plastic may scratch the windshield, so be sure to test all cleaning products before general application. IECAZES3101
- 4. Rinse off thoroughly with clean water. Be sure to remove all detergent residues, as they can be harmful to plastic parts.

#### After washing

1. Dry the vehicle with a chamois or absorbent towel, preferably microfiber terrycloth.

- 2. For drive chain-equipped models, dry and then lubricate it to prevent
- Use a chrome polish to shine chrome, aluminum, and stainless steel parts. Often the thermally induced discoloring of stainless steel exhaust systems can be removed through polishing.
- 4. Apply a corrosion protection spray (YAMALUBE Silicone Protectant & Lubricant) on all metal parts including chrome or nickel-plated surfaces. WARNING! Do not apply silicone or oil spray to seats, hand grips, rubber foot pegs or tire treads. Otherwise these parts will become slippery, which could cause loss of control. Thoroughly clean the surfaces of these parts before operating the vehicle. [EWA20650]
- Treat rubber, vinyl, and unpainted plastic parts with a suitable care product (YAMACLEAN Vinyl Dressing).
- 6. Touch up minor paint damage caused by stones, etc.
- 7. Wax all painted surfaces using a non-abrasive wax or use a detail spray for motorcycles (YAMALUBE Spray Polish & Instant Detailer).
- When finished cleaning, start the engine and let it idle for several minutes to help dry any remaining moisture.
- If the headlight lens has fogged up, start the engine and turn on the headlight to help remove the moisture.
- 10. Let the vehicle dry completely be-

fore storing or covering it.

ECA26320

#### **NOTICE**

- Do not apply wax to rubber or unpainted plastic parts.
- Do not use abrasive polishing compounds as they will wear away the paint.
- Apply sprays and wax sparingly. Wipe off excess afterwards.

EWA20660

#### **WARNING**

Contaminants left on the brakes or tires can cause loss of control.

- Make sure there is no lubricant or wax on the brakes or tires.
- If necessary, wash the tires with warm water and a mild detergent.
- If necessary, clean the brake discs and pads with brake cleaner or acetone.
- Before riding at higher speeds, test the vehicle's braking performance and cornering behavior.

FAI 184141

### **Storage**

Always store the vehicle in a cool, dry place. If necessary, protect it against dust with a porous cover. Be sure the engine and the exhaust system are cool before covering the vehicle. If the vehicle often sits for weeks at a time between uses, the use of a quality fuel stabilizer (Fuel Med RX) is recommended after each fill-up.

FCA21170

#### NOTICE

- Storing the vehicle in a poorly ventilated room or covering it with a tarp, while it is still wet, will allow water and humidity to seep in and cause rust.
- To prevent corrosion, avoid damp cellars, stables (because of the presence of ammonia) and areas where strong chemicals are stored.

#### Long term storage

Before storing the vehicle long term (60 days or more):

- Make all necessary repairs and perform any outstanding maintenance.
- 2. Follow all instructions in the Care section of this chapter.
- Fill up the fuel tank, adding fuel stabilizer according to product instructions. Run the engine for 5 minutes to distribute treated fuel through the fuel system.
- 4. For vehicles equipped with a fuel cock: Turn the fuel cock lever to the off position.
- 5. For vehicles with a carburetor: To prevent fuel deposits from building

- up, drain the fuel in the carburetor float chamber into a clean container. Retighten the drain bolt and pour the fuel back into the fuel tank
- 6. Use a quality engine fogging oil (YAMALUBE Stor-Rite Engine Fogging Oil) according to product instructions to protect internal engine components from corrosion. If engine fogging oil is not available, perform the following steps for each cylinder:
  - a. Remove the spark plug cap and spark plug.
  - b. Pour a teaspoonful of engine oil into the spark plug bore.
  - c. Install the spark plug cap onto the spark plug, and then place the spark plug on the cylinder head so that the electrodes are grounded. (This will limit sparking during the next step.)
  - d. Turn the engine over several times with the starter. (This will coat the cylinder wall with oil.) WARNING! To prevent damage or injury from sparking, make sure to ground the spark plug electrodes while turning the engine over. [EWA10952]
  - e. Remove the spark plug cap from the spark plug, and then install the spark plug and the spark plug cap.
- Lubricate all control cables, pivots, levers and pedals, as well as the sidestand and centerstand (if equipped).
- 8. Check and correct the tire air pressure, and then lift the vehicle so

- that all wheels are off the ground. Otherwise, turn the wheels a little once a month in order to prevent the tires from becoming degraded in one spot.
- Cover the muffler outlet with a plastic bag to prevent moisture from entering it.
- 10. Remove the battery and fully charge it, or attach a maintenance charger to keep the battery optimally charged. *NOTICE:* Confirm that the battery and its charger are compatible. Do not charge a VRLA battery with a conventional charger. [ECA28330]

#### TIP

- If the battery will be removed, charge it once a month and store it in a temperate location between 32-90 °F (0-30 °C).
- See page 7-26 for more information on charging and storing the battery.

### Reporting safety defects

If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA) in addition to notifying Yamaha Motor Corporation, U.S.A. If NHTSA receives similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, NHTSA cannot become involved in individual problems between you, your dealer, or Yamaha Motor Corporation, U.S.A.

To contact NHTSA, you may call the Vehicle Safety Hotline toll-free at 1-888-327-4236 (TTY: 1-800-424-9153); go to http://www.safercar.gov; or write to: Administrator, NHTSA, 1200 New Jersey Avenue, SE, West Building, Washington, DC 20590. You can also obtain other information about motor vehicle safety from http://www.safercar.gov.

# Motorcycle noise regulation TAMPERING WITH NOISE CONTROL SYSTEM PROHIBITED:

Federal law prohibits the following acts or the causing thereof: (1) The removal or rendering inoperative by any person other than for purposes of maintenance, repair, or replacement of any device or element of design incorporated into any new vehicle for the purpose of noise control prior to its sale or delivery to the ultimate purchaser or while it is in use or (2) the use of the vehicle after such device or element of design has been removed or rendered inoperative by any person.

"AMONG THOSE ACTS PRESUMED TO CONSTITUTE TAMPERING ARE THE ACTS LISTED BELOW".

These acts include tampering with the following systems; i.e., modification, removal, etc.

#### **Exhaust system**

- Muffler
- Exhaust pipe
- Silencer

#### Intake system

- Air cleaner case
- · Air cleaner element
- Intake duct

EAI IERGON

#### Maintenance record

Copies of work orders and/or receipts for parts purchased and installed on your motorcycle will be required to document that maintenance has been completed in accordance with the emissions warranty. The chart below is printed only as a reminder that maintenance work is required. It is not acceptable proof of maintenance work

Maintenance interval	Date of service	Mileage	Servicing dealer name and address	Remarks
600 mi (1000 km) or 1 month				
2000 mi (4000 km) or 6 months				
4000 mi (7000 km) or 12 months

# YAMAHA MOTOR CORPORATION, U.S.A. 2020 AND LATER MODEL SCOOTER LIMITED WARRANTY

Yamaha Motor Corporation, U.S.A. hereby warrants that each new Yamaha scooter purchased from an authorized Yamaha scooter dealer in the continental United States will be free from defects in material and workmanship for the period of time stated herein, subject to certain stated limitations.

THE PERIOD OF WARRANTY for Yamaha scooters shall be one (1) year from the date of purchase, with no mileage limitation, except for the battery, which is warranted for thirty (30) days from the date of purchase.

**DURING THE PERIOD OF WARRANTY** any authorized Yamaha scooter dealer will, free of charge, repair or replace, at Yamaha's option, any part adjudged defective by Yamaha due to faulty workmanship or material from the factory. Parts used in warranty repairs will be warranted for the balance of the product's warranty period. All parts replaced under warranty become the property of Yamaha Motor Corporation LLS A

GENERAL EXCLUSIONS from this warranty shall include any failures caused by:

- a. Competition or racing use.
- b. Installation of parts or accessories that are not qualitatively equivalent to genuine Yamaha parts.
- c. Abnormal strain, neglect, or abuse
- d. Lack of proper maintenance and off-season storage as described in the Owner's Manual.
- e. Accident or collision damage.
- f. Modification to original parts.
- g. Damage due to improper transportation

SPECIFIC EXCLUSIONS from this warranty shall include parts replaced due to normal wear or routine maintenance.

#### THE CUSTOMER'S RESPONSIBILITY under this warranty shall be to:

- Operate and maintain the scooter as specified in the appropriate Owner's Manual, and
- Give notice to an authorized Yamaha scooter dealer of any and all apparent defects within ten (10) days after discovery, and make the machine available at that time for inspection and repairs at such dealer's place of business.

WARRANTY TRANSFER: To transfer any remaining warranty from the original purchaser to any subsequent purchaser, it is imperative that the machine be inspected and registered for warranty by an authorized Yamaha scooter dealer. In order for this warranty to remain in effect, this inspection and registration must take place within ten (10) days after transfer. A reasonable dealer-imposed fee may be charged for the inspection.

#### **EMISSIONS CONTROL SYSTEM WARRANTY**

Yamaha Motor Corporation, U.S.A. also warrants to the ultimate purchaser and each subsequent purchaser of each Yamaha scooter covered by this warranty that the vehicle is designed, built, and equipped so as to conform at the time of sale with all U.S. emissions standards applicable at the time of manufacture and that it is free from defects in materials and workmanship which would cause it not to meet these standards within the periods listed immediately below. Failures other than those resulting from defects in material or workmanship which arise solely as a result of owner abuse and/or lack of proper maintenance are not covered by this warranty.

ENGINE DISPLACEMENT	PERIOD
Under 50cc	6,000 km (3,750 miles) or five years, whichever occurs first
50cc to 169cc	12,000 km (7,465 miles) or five years, whichever occurs first
170cc to 279cc	18,000 km (11,185 miles) or five years, whichever occurs first
280cc or over	30,000 km (18,641 miles) or five years, whichever occurs first

YAMAHA MOTOR CORPORATION, U.S.A. MAKES NO OTHER WARRANTY OF ANY KIND, EXPRESSED OR IMPLIED. ALL IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE WHICH EXCEED THE OBLIGATIONS AND TIME LIMITS STATED IN THIS WARRANTY ARE HEREBY DISCLAIMED BY YAMAHA MOTOR CORPORATION, U.S.A. AND EXCLUDED FROM THIS WARRANTY.

SOME STATES DO NOT ALLOW LIMITATIONS ON HOW LONG AN IMPLIED WARRANTY LASTS, SO THE ABOVE LIMITATIONS MAY NOT APPLY TO YOU. ALSO EXCLUDED FROM THIS WARRANTY ARE ANY INCIDENTAL OR CONSEQUENTIAL DAMAGES INCLUDING LOSS OF USE. SOME STATES DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THE ABOVE EXCLUSION MAY NOT APPLY TO YOU.

THIS WARRANTY GIVES YOU SPECIFIC LEGAL RIGHTS, AND YOU MAY ALSO HAVE OTHER RIGHTS WHICH VARY FROM STATE TO STATE.

YAMAHA MOTOR CORPORATION, U.S.A. Post Office Box 6555 Cypress, California 90630

1-800-962-7926

10

- Q. What costs are my responsibility during the warranty period?
- A. The customer's responsibility includes all costs of normal maintenance services, non warranty repairs, accident and collision damages, and oil, oil filters, spark plugs, and brake shoes.
- Q. What are some examples of "abnormal" strain, neglect, or abuse?
- A. These terms are general and overlap each other in areas. Specific examples include: Running the machine out of oil, sustained high-rpm, full-throttle, operating the machine with a broken or damaged part which causes another part to fail, damage or failure due to improper or careless transporation and or tie down. If you have any specific questions on operation or maintenance, please contact your dealer for advice
- Q. Does the warranty cover incidental costs such as towing or transportation due to a failure?
- A. No. The warranty is limited to repair of the machine itself
- Q. May I perform any or all of the recommended maintenance shown in the Owner's Manual instead of having the dealer do them?
- A. Yes, if you are a qualified mechanic and follow the procedures specified in the Owner's and Service Manual. We do recommend, however, that items requiring special tools or equipment be done by a Yamaha Riya dealer.
- Q. Will the warranty be void or cancelled if I do not operate or maintain my new Riva exactly as specified in the Owner's Manual?
- A. No. The warranty on a new Riva cannot be "voided" or "cancelled." However, if a particular failure is caused by operation or maintenance other than as shown in the Owner's Manual, that failure may not be covered under warranty.
- Q. What responsibility does my dealer have under this warranty?
- A. Each Yamaha Riva dealer is expected to:
  - Completely set up every new machine before sale.
  - Explain the operation, maintenance, and warranty requirements to your satisfaction at the time of sale, and upon your request at any later date.
  - Each Yamaha Riva dealer is held responsible for his setup, service and warranty repair work.
- O Is the warranty transferable to second owners?
- A. Yes. The remainder of the existing warranty can be transferred upon request. The unit has to be inspected and re-registered by an authorized Yamaha Riva dealer for the policy to remain effective.

If your machine requires warranty service, you must take it to any authorized Yamaha Riva dealer within the continental United States. Be sure to bring your warranty registration card or other valid proof of the original date of purchase. If a question or problem arises regarding warranty, first contact the owner of the dealership. Since all warranty matters are handled at the dealer level, this person is in the best position to help you. If you are still not satisfied and require additional assistance, please write:

YAMAHA MOTOR CORPORATION U.S.A. CUSTOMER RELATIONS DEPARTMENT P.O. Box 6555 Cypress, California 90630

When contacting Yamaha Motor Corporation, U.S.A. don't forget to include any important information such as names, addresses, model, V.I.N (frame number), dates, and receipts.

#### CHANGE OF ADDRESS

The federal government requires each manufacturer of a motor vehicle to maintain a complete, up-to-date list of all first purchasers against the possibility of a safety-related defect and recall. This list is compiled from the purchase registrations sent to Yamaha Motor Corporation, U.S.A. by the selling dealer at the time of your purchase.

If you should move after you have purchased your new motorcycle, please advise us of your new address by sending a postcard listing your Riva model name, VI.N (frame number), dealer umber (or dealer's name) as it is shown on your warranty card, your name and new mailing address Mail to:

YAMAHA MOTOR CORPORATION, U.S.A. P.O. Box 6555 Cypress, California 90630 Attention: Warranty Department

This will ensure that Yamaha Motor Corporation, U.S.A. has an up-to-date registration record in accordance with federal law.

10

### YAMAHA EXTENDED SERVICE (Y.E.S.)

Keep your Yamaha protected even after your limited warranty expires with genuine Yamaha Extended Service (Y.E.S.).

- Y.E.S. is designed and administered by Yamaha Motor Corporation to provide maximum owner satisfaction. It provides uninterrupted factory-backed coverage for extra peace of mind.
- Y.E.S. is flexible. You choose the plan that's right for you: 12 months, 24 months, 36 months or, on certain models, even 48 months beyond your warranty period.
- Y.E.S. is designed and administered by the same Yamaha people who handle your warranty—
  and it shows in the comprehensive coverage benefits. There are no mileage limitations.
  Coverage isn't limited to "moving parts" or the "drivetrain" like many other plans. And Y.E.S.
  covers manufacturing defects just like the warranty. See the sample contract at your Yamaha
  dealer to see how comforting uninterrupted factory-backed protection can be.
- You don't have to pay anything for covered repairs. There's no deductible to pay, and repairs aren't "pro-rated." You don't have any "out-of-pocket" expenses for covered repairs.
- In addition, Travel and Recreation Interruption Protection (TRIP) is included at no extra cost.
  TRIP gives you up to \$250 reimbursement per occurrence for any reasonable expenses you
  incur because your Yamaha needs covered service: replacement vehicle rental, emergency
  towing, phone calls, even food and lodging when you are away from home. This superb
  coverage goes into effect when you purchase Y.E.S., so it applies to any warranty repairs as
  well as covered repairs during your entire Y.E.S. plan period.
- Y.E.S. coverage is honored at any authorized Yamaha dealer nationwide.
- Y.E.S. coverage is transferable to a new owner if you sell or trade-in. That can make your Yamaha much more valuable!

This excellent Y.E.S. plan coverage is only available to Yamaha owners like you, and only while your Yamaha is still within the Yamaha Limited Warranty period. So visit your authorized Yamaha dealer to get all the facts. They can show you how easy it is to protect your investment with Yamaha Extended Service.

We urge you to act now. You'll get the excellent benefits of TRIP coverage right away, and you'll rest easy knowing you'll have strong factory-backed protection even after your Yamaha Limited Warranty expires.

#### A special note:

If visiting your dealer isn't convenient, contact Yamaha with your VIN number and we'll be happy to help you get the Y.E.S. coverage you need.
